INTRODUCTION

Step into the world of refined minimalism with the new Just Black product family. The collection consists of a hyper-miniaturized track system with several lighting insert options, a linear wall-mounted surface light, and an acoustic suspension light.

The entire range features extremely minimalist design, blending seamlessly with any interior. Defined by fine lines, circles and curves, the Just Black family offers nearly endless possibilities for unique combinations that elevate any space.

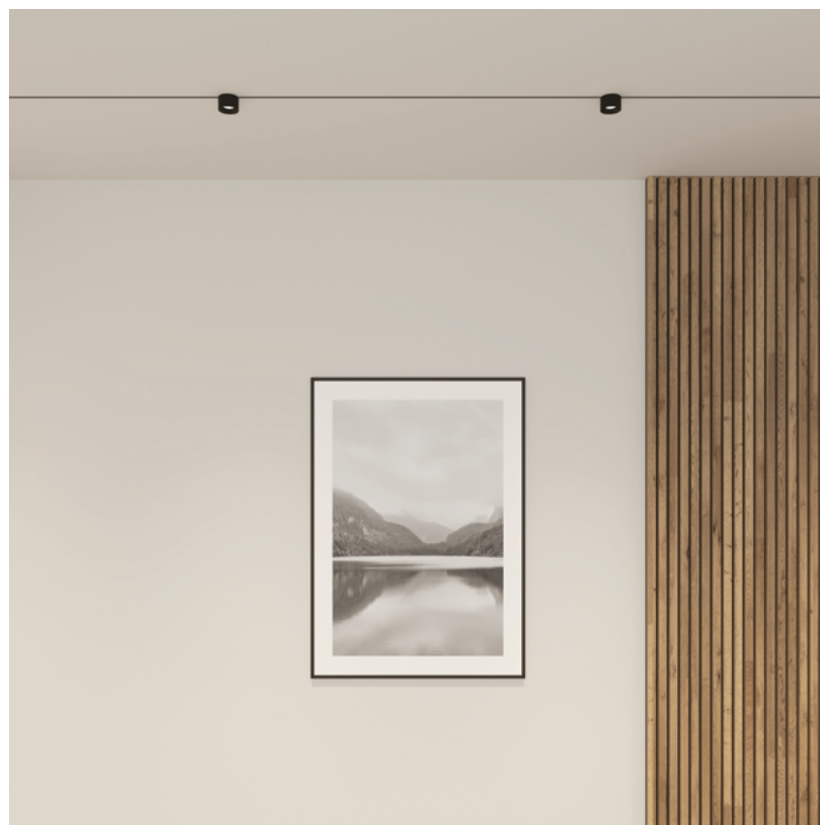

JUST BLACK SYSTEM

Just Black System is a comprehensive, versatile lighting solution defined by a millimeter-thin black line that guides the path of light. Specially developed to integrate different types of lighting into the most complex interiors, this system brings minimalist designs to any space.

Available in three mounting options - an edgeless recessed version, a rectangular surface-mounted version and a round suspended version - the track can be installed on both ceilings and walls, extending its applications and adaptability. With this wide range of variety, the Just Black System can meet virtually any design requirement.

JUST BLACK SYSTEM

The surface mounted Just Black System enables dynamic lines that alternate seamlessly between straight and curved segments as desired, adapting to directional changes on the same level or between wall and ceiling transitions.

The suspension Just Black System has a cylindrical aesthetic that emphasizes the light inserts and, thanks to the rounded L-connectors, enables changes of direction as the track progresses.

The recessed Just Black System blends almost seamlessly into the wall and ensures a visually flawless and maximally concealed appearance.

All of the Just Black System inserts are magnetically attached for easy installation, replacement and combination. The inserts offer unrivalled flexibility to meet any requirement, whether you prefer spotlights for focused lighting or a continuous LED line for homogeneous illumination, these inserts give you the freedom to create your lighting design as you wish.

JUST BLACK LINE

Be inspired by the versatility and beauty of linear design with Just Black Line - a millimeter-thin, precise surface wall light that opens up infinite possibilities. Just Black Line can be arranged to intertwine or form complex patterns that catch the eye, or they can be installed individually for a clean, minimalist effect.

Available in three models, including a rotatable and pivotable version, Just Black Line allows designer the ability to explore the endless combination possibilities and craft a bespoke lighting solution for any project.

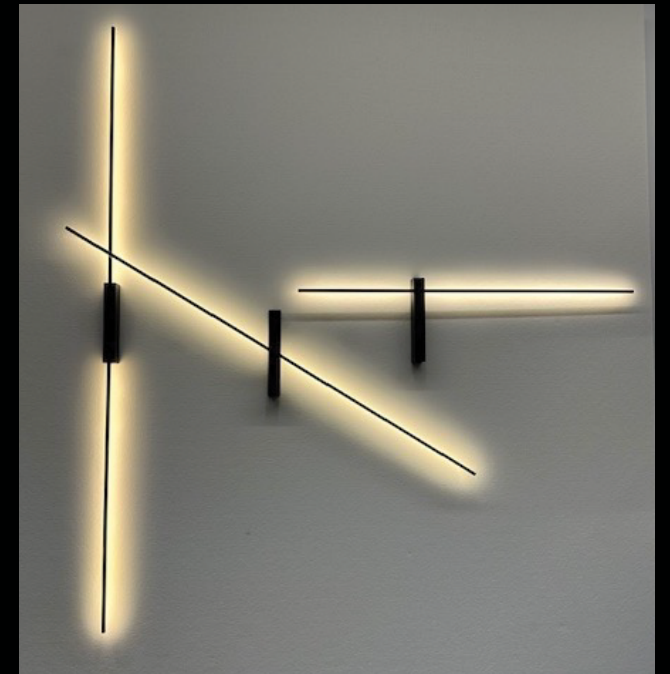

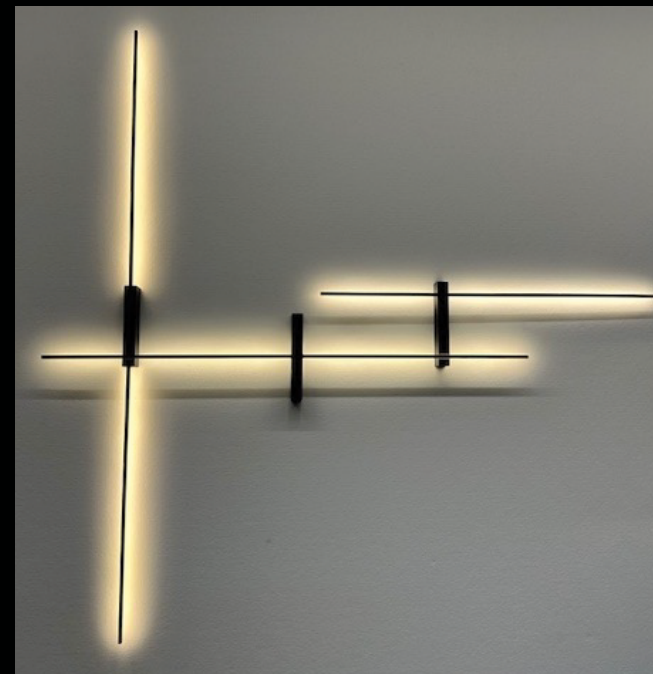

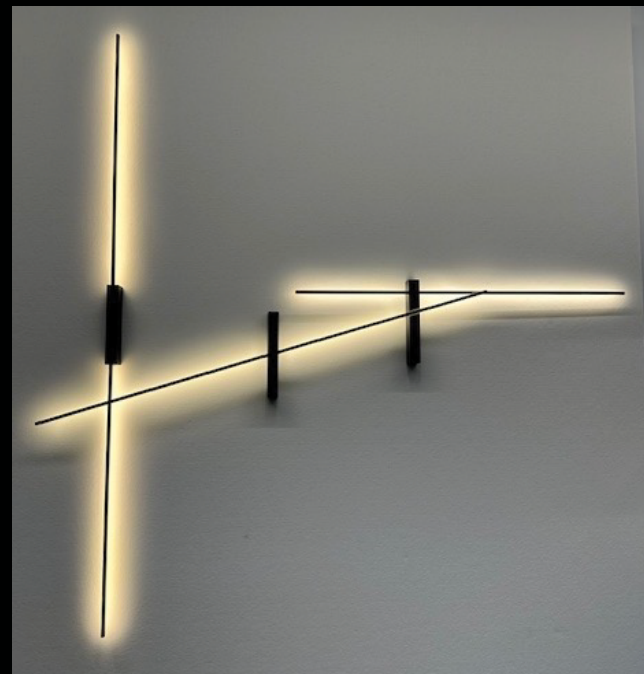

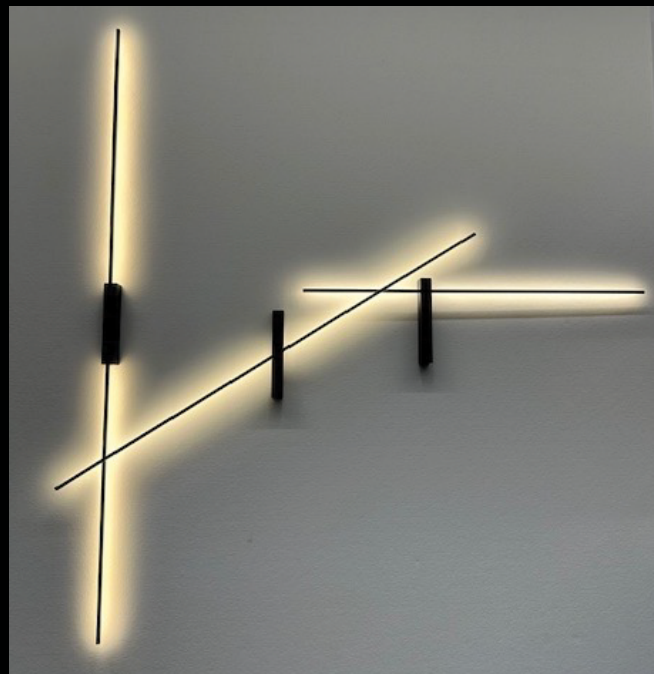

JUST BLACK LINE

JUST BLACK LINE
WALL LIGHTS

Only 3 luminaires but endless combinations

The LINE ADJUSTABLE has a slightly greater distance from the wall so that it can be positioned in front of the other two LINE models without any problems. This makes overlapping lines of light possible. This and the fact that the line adjustable can be rotated allow for versatile lighting arrangements.

JUST BLACK ACOUSTIC

Discover the seamless harmony of light and sound with Just Black Acoustic – a miniaturized integrated into a sustainable acoustic panel, blending silence and light.

The combination of the sophisticated Just Black track and highly efficient acoustic absorber results in superior light and sound quality. For a fully customized experience, both the track inserts and the color of the acoustic material can be tailored to suit any design vision.

Just Black Acoustic consists of three individually selectable single luminaires, round, rectangular and square panels, each compatible with both Just Black Imagine or Just Black Flexline inserts. Just Black Imagine enables directional lighting to accent specific areas, while Just Black Flexline provides soft, general lighting for a pleasant ambience. The 24V 2-phase track design allows lighting inserts to be easily moved, swapped and combined, providing infinite possibilities.

Made from sustainably sourced recycled plastic bottles, each acoustic panel can be configured in one of 32 acoustic color choices, providing designers a range of choices to perfectly meet their needs.
